Survey Collection Method:

1. Live Agent Interview	319	42%
2. Automated/IVR	445	58%

Methodology: This poll was commissioned by ABC27 News and conducted by Susquehanna Polling and Research, Inc. Completed interviews were conducted October 4-9, 2016 with 764 likely general election voters in Pennsylvania, most of which have prior vote history. In order to be eligible to complete the survey, respondents had to first confirm their likelihood of voting in the November 8th General Election for President and U.S. Senator.

Interviews are conducted with respondents who use a landline telephone as their primary means of contact through our IVR/automated polling software, in which survey respondents score their answers to a pre-recorded set of questions using their telephone key pads. An augmentation of live agent interviews is simultaneously conducted with harder-to-reach segments of the population (e.g., younger age groups, households using cellular telephone exchanges as their primary means of contact, etc.) using the professionally-trained survey research staff from SP&R's main telephone call center. Results to both live agent interviews and automated/IVR surveys are then combined into a single data set. Surveys are carefully monitored to ensure a representative sample of Pennsylvania's electorate is achieved based on party, geography, age, gender and other demographics; results are sometimes statistically weighted.

The margin of error for a sample size of 764 is +/-3.5% at the 95% confidence level.
